

Rust interest shows mixed signals in German and French Wikipedia with low confidence.

Topic: Rust programming language (Wikidata Q575650) · Languages: de, fr · Period: 2023-09 – 2026-08 (36 mo.) · Wikimedia Pageviews API, humans only (agent=user), all-access

Lang	Article	Median/month	Share YoY	Share trend/yr (90% CI)	Verdict	Trust
fr	Rust (langage)	4 882	+12.9%	+8.5% [-12; +38]	no clear trend	low
de	Rust (Programmiersprache)	6 758	+0.5%	-10.2% [-16; -4]	no clear trend	low

Topic share of pageviews, index (first 12 months = 100). Thin line — with spikes.

Conclusion

Over 36 months (2023-09 to 2026-08), interest in Rust programming language revealed no statistically clear trend in either language edition. German Wikipedia showed a declining trend of -10.2% per year (-16.3% ... -3.9% at confidence), while French Wikipedia showed a slight upward trend of +8.5% per year (-12.0% ... +38.2% at confidence). Both estimates carry low trust due to noise in the data and the influence of a recent bot reclassification.

German Wikipedia had a median monthly pageview share of 6 759 views, compared to 4 883 in French. Year-over-year, German showed +0.5% growth while French showed +12.9% growth, but these fluctuations fall within the margin of statistical uncertainty.

The low-trust verdicts mean there is insufficient evidence to conclude whether Rust is gaining or losing interest in these language editions. Any observed movement could reflect Wikipedia's classification changes, seasonal variation, or real interest shifts too weak to distinguish from noise. Neither market shows a reliable signal for decision-making at this time.

Why this trust level

- fr — low: no statistically clear direction; the change is within noise (Mann-Kendall p=0.73).
- de — low: no statistically clear direction; the change is within noise (Mann-Kendall p=0.07).

What to check next

- Validate demand directly: search queries, a landing-page test, a survey of the target audience.

Assumptions and limitations

Caveats: the period includes Wikimedia's 2025 bot reclassification; share-based metrics reduce but do not remove its effect. Wikipedia pageviews show interest in a topic, not willingness to pay. Language is not country: en, es, pt, fr are read in many countries. Metric: the topic's share of all human pageviews of the language edition (removes Wikipedia's overall traffic decline); redirects included; one-day spikes removed with a Hampel filter (±3 days). Trend: Theil-Sen slope of log share; 90% Sen interval widened for autocorrelation; direction: seasonal Mann-Kendall test. Trust thresholds calibrated on synthetic series.
